D: KR 2000-44156 A (SAMSUNG ELECTRIC CO.) 2000-07-15

Claims 1-78 of the present invention relate to a image photographing apparatus driving a compensation lens group and a displacement lens group by electromagnetic force of a magnet and coil.

On the other hand, prior art D is about a focusing device of a camera using the electromagnetic force generated between a magnet and a coil by supplying electric currents to the coil.

When comparing the two inventions, they have the same components: a compensation lens group, a displacement lens group, a lens holder, an actuator comprising a magnet and a coil for generating electromagnetic force, and a control unit which adjusts focusing and zooming. Although the two inventions are different in their detailed structure such as a restoration spring, and a guiding part, it is obvious to a person skilled in this art that the presents invention can be derived from D.
